I.-Subject Identification	
Type	FORMACIÓN BÁSICA
Teaching period	1 course, 2Q semester
Nº of credits	6
Language in wich the subject is taught	English

II.-Presentation

Vectorial Calculus is part of a fundamental base for the construction of designs, procedures, methodologies, tools and algorithms present in a considerable part of the specific matters that a graduated in biomedical engineering will study during their formation process.

The main formative goals of the subject of Mathematical Methods for Bioengineering are:

• Highlight the importance of the **analysis** and **multivariate calculus** in the design, description and study of usual systems in engineering and biomedicine.

• Provide the student with the capacity to define and understand multivariate models and perform efficient calculations, with the goal of solving engineering problems about this kind of systems, with special interest in biomedical applications.

Previous requirements and **recommendations:** it is convenient for the student to have coursed the subjects of **Calculus** and **Algebra** so that they possess knowledge about single-variable real functions, limits, continuity, derivability, sequences and function sequences, calculation of primitives, integration, vector spaces, linear applications and linear systems.

In order to facilitate the overcoming of the subject and reaching the formative goals, the students are encouraged to **read the contents** of each lecture **beforehand**, the **completion** of the **activities** proposed in class and the **resolution** of **problems** proposed in the recommended bibliography, as well as the attendance to mentor meetings with the teacher whenever necessary.

ATTENTION: INDICATIONS ABOUT DIRECTED TO STUDENTS STUDYING THIS COURSE IN THE CAMPUS OF ALCORCON

Students will be able to remotely attend the classes and/or practicals (if the situation allows it) or to face-to-face groups taught in Fuenlabrada Campus. Tutoring hours, as usual, by previous appointment, and can be online if required.

III.-Learning outcomes

CB1. Proven knowledge and understanding of an area of study based on general secondary education and at a level which, although supported by advanced text books, also includes certain aspects that imply knowledge from the forefront of the field of study.

CB5 . That students have developed the learning skills needed to undertake further studies with a considerable degree of autonomy.

CE14. Solve mathematical engineering problems using knowledge of: linear algebra, differential calculus, integral calculus, and differential and partial derivative equations.

• Key for degrees not adapted to RD 822/21: **CB** - basic competences, **CG** - generic competences, **CE** - specific competences, **CT** - transversal competences.

• Key for degrees adapted to RD 822/21: **CON** - knowledge, **COM** - competences, **HAB** - skills.

IV.-Contents

IV.A.-Syllabus

-Thematic Block I: Introduction:

• *Lesson 1: Geometry in the Euclidean Space: Vectors*

Vectors in two and three dimensions. Dot Product. Cross Product. Equations for Planes and Distances. Geometry in n-dimensions. New coordinate systems.

-Thematic Block II: Differentiation in Several Variables:

• *Lesson 2: Differentiation in Several Variables*

Functions of Several Variables. Surface Graphing. Limits. Definition of Derivative. Differentiability. Higher-Order Partial Derivatives. The Chain Rule. Directional Derivatives. The Gradient.

• *Lesson 3: Vector-Valued Functions*

Parametrized Curves. Arclength and Introduction to Differential Geometry. Introduction to Vector Fields. Gradient, Divergence, Curl and Del (Nabla) Operator.

• *Lesson 4: Higher Order Derivatives: Maxima and Minima in Several Variables*

Differentials and Taylor's Theorem. Extrema of Functions. Lagrange Multipliers. Some Applications of Extrema.

-Thematic Block III: Integration in Several Variables:

• *Lesson 5: Multiple Integration*

Areas and Volumes. Double Integrals. Changing the Order of Integration. Triple Integrals. Change of Variables. Applications of Integration.

• *Lesson 6: Line Integrals*

Scalar and Vector Line Integrals. Green's Theorem. Conservative Vector Fields.

• *Lesson 7: Surface Integrals and Vector Analysis*

Parametrized Surfaces. Surface Integrals. Integral Theorems of Vector Analysis: Stoke's and Gauss's Theorems.

IV.B.-Training activities

Type	Title
Theoretical sessions	Theoretical contents review, coupled with basic exercises of difficulty similar to that of the evaluation written tests
Experimental and/or technological laboratories	Realization of practices about problem resolution using Python on several Thematic Blocks
Resolution of exercises, problems, case studies	Problem resolution exercises at the end of each Thematic Block or lesson.

Q2803011B UNIVERSIDAD REY JUAN CARLOS
Fecha firma: 14/11/2026 19:05 | Hash: 952c7046fd7f5761ecf9fadf3d376371.

V.-Student workload	
Theoretical sessions	30
Resolution of exercises, problems, case studies, etc.	18
Practical sessions in experimental, technological and clinical laboratories, fieldwork, etc.	8
Tests and/or exams	4
Academic tutorials	18
Related activities: conferences, seminars, etc.	0
Preparation of theoretical sessions and self-study	25
Preparation of practical tasks, exercises, case studies, projects, etc.	27
Preparation for tests and/or exams	50
Total student workload	180

VI.-Methodology and academic programme

Type	Period	Content
Theoretical sessions	Week 1 to Week 13	A detailed explanation of the fundamental concepts and problems followed in the subject.
Experimental and/or technological laboratories	Week 3 to Week 14	Realization of practices with Python
Resolution of exercises, problems, case studies	Week 1 to Week 1	Use of a colection of problems on the subject, including practical biomedical applications.
Other activities	Week 1 to Week 14	Student work with complementary material, problems and solutions.
Academic tutorials	Week 1 to Week 17	After the appointment via email. There won't be tuition in the 48 hours previous to any written test.
Tests and/or exams	Week 7 to Week 17	Partial and Final exams.

VII.-Assessment methods

The general assessment method is continuous as established in the *Regulation for the Assessment of Learning Outcomes* of Rey Juan Carlos University.
All the assessment systems established in the degree report must be employed, except for those that have a minimum weight of 0%, which can be used by professors in the academic years they consider relevant. Each assessment system may be applied through one or more assessment activities, consistent with the system. No assessment activity can exceed individually 60% of the overall grade for the subject.
The sum of non re-evaluable activities cannot exceed 40% of the overall grade for the subject and, in general, should not have an established minimum grade (except for practical activities in which, strictly speaking, the conditions of the ordinary call cannot be reproduced in the extraordinary call).
Those students who do not manage to pass the subject in the ordinary call, or do not attend this first call, may attend the extraordinary call only for failed re-evaluable assessment activities.
The distribution and characteristics of the assessment activities are described below.

VII.A.-Description and weight of the assessment activities

Q2803011B UNIVERSIDAD REY JUAN CARLOS
Fecha firma: 14/11/2026 19:05 | Hash: 952c7046fd7f5761ecf9fadf3d376371.

Continuous ordinary assessment:
The distribution and characteristics of the assessment tests are those described below. Only in exceptional cases and for special reasons may the teacher add changes to the Guide. These changes will require the prior consultation with the Subject Head and the prior and explicit authorisation of the Degree Programme Coordinator, who will notify the Vice-Rector's office in charge of Academic Affairs of the modifications made. In any case, the changes proposed must take into account the stipulations of the verified report. In order for these changes to take effect, they must be duly communicated at the start of the course to the students using Aula Virtual.
The combination of activities that are not reassessable cannot exceed 50% of the subject grade and, in general, cannot have a minimum grade (except for the case of laboratory or clinical work placements, where duly justified), and tests which exceed 60% of the subject weighting cannot be added.
Extraordinary assessment: Students who do not manage to pass the ordinary assessment, or who did not attend, will be subject to completion of an extraordinary assessment to verify their acquisition of the skills established in the guide, only for activities that are re-assessable. **Ordinary evaluation**
The ordinary evaluation of the subject basically consists of a continuous evaluation which has three differentiated parts:
1. Laboratory/exercises: 10% of the final mark.
To facilitate the understanding of the subject, throughout the course, a series of exercises and practices (laboratory) will be proposed, usually coinciding with the end of each block. Completing the activities and delivering the corresponding reports with the obtained results is individual and **mandatory**. This activity is **not repeatable**. The laboratory reports delivered late or delivered in previous academic years will not be considered. The ponderation of the activity only affects the final mark once the written tests are passed. There is **no minimum grade** for this activity.
1. First written test: 45% of the final mark.
The first written test will include the contents of the first lessons defined in the section Contents. This test is mandatory, **re-assessable**, and **removes contents**. A **minimum mark** of **5/10** is required.

1. Second written test: 45% of the final mark.
In this second mandatory written test, the rest of the contents of the subject will appear. This test is mandatory, **re-assessable**, and **removes contents**. A minimum mark of **5/10** is required.
Summarizing

Activity	Weight	Minimum Mark	Re-assessable
Laboratory Exercise	10%	No	No
First written test	45%	5	Yes
Second written test	45%	5	Yes

Extraordinary Evaluation
In the extraordinary evaluation, those evaluation activities classified as re-assessable in the ordinary evaluation will be repeated, also keeping all their characteristics. Therefore, the extraordinary evaluation will consist of **two parts**, corresponding to the reevaluation of the **two written tests**, which will have the same weight and the same minimum note specified in the ordinary evaluation. In this way, to pass the course, each student must complete and pass the reevaluation test or tests corresponding to those written tests that you have not passed in the ordinary evaluation period.
•Revision of the score of the written tests.
The following considerations are important in the revision of the qualification of exercises and practices.:
1. The time dedicated to the revisions of the marks is not oriented to the resolution of doubts but to the resolution of errors or discrepancies in marking.
2. The student must bring to the revision the resolution of the test.
3. To solve doubts about the problems or questions introduced in the tests, the procedure will be the same as with the rest of the doubts throughout the course, provided the student asks for tuition.
4. In the case of any kind of plagiarism, in any kind of test or exercise which counts on the final mark, the procedure followed will be the one stipulated in the "Normative of Academic Conduct of the University Rey Juan Carlos" ("Normativa Sobre Conducta Académica de la Universidad Rey Juan Carlos").

Advance Evaluation Call
According to the current normative, students who have a justified need to take the Advanced Evaluation call will submit two written tests, the first covering the first block of the subject, and the second covering the second part of the subject. The final mark of the subject will be the mean value of the mark of each exam; each exam counts **50%** towards the final mark**.**

Q2803011B UNIVERSIDAD REY JUAN CARLOS
Fecha firma: 14/11/2026 19:05 | Hash: 952c7046fd7f5761ecf9fadf3d376371.

Students who wish to opt for this assessment will have to get an academic exemption for the subject, which they will have to request from the Dean or Director of the Centre which teaches their course. An academic exemption may be granted where the subject's own characteristics allow for it.

Review of assessment tests

In accordance with the exam appeal regulations of the Universidad Rey Juan Carlos.

Students with a disability or special educational needs

Curricular adaptations for students with a disability or special educational needs will be determined by the Disabled Students Support Department, in accordance with the regulations governing the Disabled Students Support service, approved by the Universidad Rey Juan Carlos Council, in order to guarantee equal opportunities, inclusive treatment, universal accessibility and a greater guarantee of academic success.

For this purpose, this Department will have to issue a curricular adaptation report; students with disabilities or special educational needs must contact the Department to analyse the different alternatives together.

Academic behaviour, academic integrity and honesty

The Universidad Rey Juan Carlos is completely committed to the highest standards of academic integrity and honesty.

Therefore, studying at the URJC means you accept and agree to the academic integrity and honesty values described in the University's Code of Ethics. In order to monitor this procedure, the University has Regulations on academic behaviour at the Universidad Rey Juan Carlos and uses different tools (anti-plagiarism, supervision?) which provide a collective assurance that these essential values are completely developed

VII.B. Assessment of students with academic exemption from class attendance

Having Academic Exemption from Class Attendance (DAAC) does not imply that students are automatically exempt from participating in the continuous assessment activities or in the training activities of compulsory attendance as established in the teaching guide. Once the exemption has been granted, students must contact the subject's teaching staff, who will propose the adaptations he/she may consider relevant, as long as they guarantee the acquisition and adequate assessment of the learning goals established. Students must maintain adequate communication with the teaching staff so that they may provide information on the dates for training and assessment activities, if these are not established in the programme and available for students at the time of achieving the exemption.

Subject with possibility of academic exemption: Yes.

VII.C. Review of assessment activities

In accordance with the Regulation for the Assessment of Learning Outcomes of Rey Juan Carlos University.

VII.D.-Students with a disability or special educational needs

In order to guarantee equal opportunities, non-discrimination, universal accessibility and academic success, students with disabilities or especial education needs may request curricular adaptations to follow their studies. These adaptations will be provided by the Unit of Attention to People with Disabilities of Rey Juan Carlos University, in accordance with the regulation which regulates the service for the Attention of People with Disabilities at the University. This Unit will issue a report for curricular adaptations, so that students with disabilities or special education needs must contact the service (at e-mail discapacidad.programa@urjc.es) in order to provide relevant information for different educational alternatives.

VII.E.-Academic behaviour, academic integrity and honesty

Rey Juan Carlos University is fully committed to the highest standards of academic integrity and honesty, so studying at the URJC means assuming and subscribing to the values of integrity and academic honesty set out in the University's Ethical Code. To support this process, the University has Rey Juan Carlos University's Academic Conduct Regulation as well as different tools (anti-plagiarism, supervision...) that offer a collective guarantee for the full development of these essential values.
